Trusted by

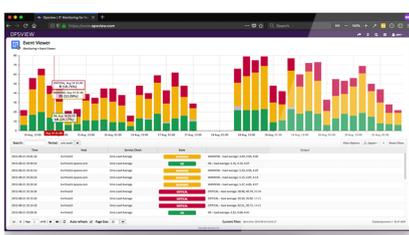

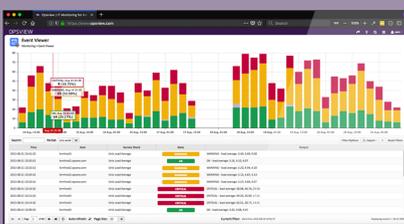

Opsview is passionately focused on monitoring that enables DevOps teams to deliver smarter business services, faster. We help them be successful by providing unified, actionable insights into modern IT; including hardware, OSs, and applications, on-premises and in any cloud. Our vision is to harness the potential of the team to create the future for IT Operations.

opsview monitor

Monitor Everything

Use Opspacks to distill the operational intelligence needed to monitor everything from Docker and VMware to Apache, Amazon Web Services, Hyper-V and much more. 100% Nagios plugin compatible.

[READ MORE >](#)

Integrate anything...

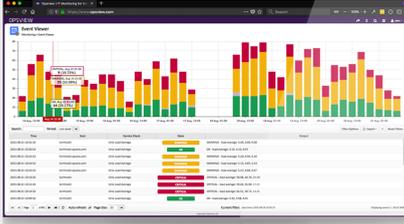

Seamlessly integrate Opsview Monitor with your existing enterprise platforms like ServiceNow, Jira, Slack, VictorOps, PagerDuty and Twilio. Combine with Ansible, Puppet or Chef to automatically monitor workloads as they deploy.

[READ MORE >](#)

Scale anywhere...

Built for hybrid IT operations, Opsview Monitor scales to tens of thousands of hosts and apps on bare metal, virtual machines or in your elastic cloud environment.

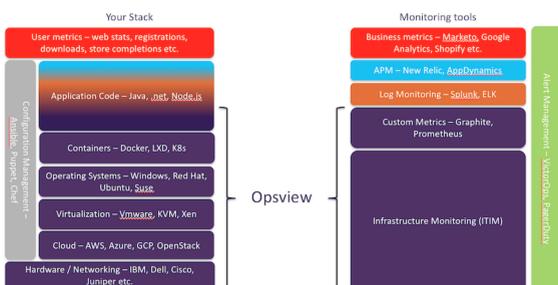

[READ MORE >](#)

WHY OPSVIEW MONITOR

Where we fit into your stack

We deliver unified insight into your stack from your hardware and network infrastructure, through to your public and private cloud environments, virtual machines, operating systems, container orchestration layer right on up into your application code layer. Opsview Monitor provides the foundation upon which you can run log monitoring, application performance monitoring (APM) and business metrics systems.

WHAT'S NEW IN 6.0

How Opsview Monitor works

-  Opsview Monitor Free Plan gets you monitoring up to 50 hosts quickly. Get free community support from our Slack channel.
-  Seamlessly scale your estate, capabilities and support coverage with our SMB and Enterprise Plans.
-  Auto-monitor all your Windows and VMware services in one click.
-  Gain immediate insight by seeing metrics, dashboards and alerts in one place.
-  Deploy the Opsview agent across 10,000's of hosts using Ansible, Puppet or Chef.
-  Easily extend Opsview Monitor with your own custom integrations and Opspacks to get full visibility across your hybrid IT environment.

Opsview Monitor is often used by DevOps looking to:

-  Upgrade from existing open source ITIM monitoring tools to a familiar, but enterprise-grade alternative.
-  Deploy a unified monitoring platform rather than trying to bolt together a collection of overlapping IT-centric solutions from the same vendor.
-  Reduce the lock-in inherent in SaaS monitoring tools and control their data.

Premium Features & Services

-  **Proactive Support**
We help you every step of the way by providing exceptional customer support to help you achieve success.
-  **SLA Reporting and Trend Reports**
Create and automate a full range of reports, including Service Level Agreement (SLA) reports.
-  **Network Analyzer**
Deep dive into your network by analyzing NetFlow, sFlow, and jFlow data from vendors like Cisco, Juniper and HP.
-  **High Availability & DR**
Enterprise-grade resilience allows 'hot' or 'warm' failover to a secondary site in the event of a failure.
-  **Distributed Architecture**
Scale out your monitoring over multiple sites with our highly distributed architecture.
-  **Multitenancy**
Users can create their own hosts and choose how they want to monitor them, all using our intuitive UI.
-  **White-labelling**
Available for all MSP customers, is an effective way to easily promote and advertise your brand.
-  **Scalability**
Scale in excess of 20,000 hosts - however large your estate gets, we've got you covered.
-  **Elastic Pricing for MSPs**
Users can create their own hosts and choose how they want to monitor them, all using our intuitive UI.

Monitoring

is now one less thing to worry about.

GET MONITORING

Your Systems. Tamed

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Duis a justo fermentum, scelerisque quam at, iaculis ligula. Cras vestibulum nisi nec turpis aliquet.

Monitoring made easy

Easy to learn, easy to use. Monitoring you don't need a degree in computer science to understand

Any System, Anywhere

Easy to learn, easy to use. Monitoring you don't need a degree in computer science to understand

Monitoring made easy

Easy to learn, easy to use. Monitoring you don't need a degree in computer science to understand

Opsview is loved and trusted by some of the world's top companies.

Your time is valuable. Get more of it.

Opsview is designed to alert you to exactly what needs your attention and why. Helping you focus and prioritize instead of putting fires out.

Network Analyzer

Monitor NetFlow and traffic to and from any devices on any network. Even be able to see which application is using the most bandwidth.

Autodiscovery

With easy disbursement of SNMP poles, you'll see your entire environment and get up and running quicker by identifying all your devices on your network with one click.

Business Service Monitoring

Collect and group components that affect a business service. Identify exactly what is being affected, and fix it before service is interrupted.

SNMP Trap Processing

Set SNMP traps to only be alerted when needed, drastically reducing the amount of CPU and bandwidth to monitor large networks.

IT Monitoring Buyer's Guide: Does Your Monitored IT Estate Need Encryption?

by Neil Ferguson, Opsview Support Analyst | 29 April 2015

Security has gone mainstream. As we transition more aspects of our lives online and to mobile devices, the unintended consequence is that we leave ourselves more vulnerable. If the public didn't know this before, it certainly does now.
